Projects

Simple MVC [gitnjole/simple-mvc](https://github.com/gitnjole/simple-mvc)

- Lightweight custom PHP framework, inspired by Laravel, aimed at providing a solid foundation for web application development and primarily utilized for educational purposes
- Implemented essential features such as MVC architecture, clean routing, database support for MySQL, template and layout engine, middleware support, and comprehensive error handling for debugging

LaraJobs [gitnjole/lara-jobs](https://github.com/gitnjole/lara-jobs)

- Developed a RESTful API-based job posting board using Laravel framework and MySQL database, enabling users to create and browse job listings seamlessly.
- Implemented necessary features like user authentication, the ability to publish jobs, an admin panel, and user-friendly browsing and filtering options, all the while keeping future improvements in mind.

Quantum Leap [gitnjole/quantum-leap](https://github.com/gitnjole/quantum-leap)

- Currently in ongoing development, a file transfer website aimed at providing users with file management functionalities, with plans to evolve into a full-fledged privately hosted file transfer web application over time.
- Implemented essential features such as file upload and management functionalities, following RESTful conventions, and enabling users to manage their own uploaded files within their network.
